

THE JOURNAL OF IMMUNOLOGY[®]

Official Journal of The American Association of Immunologists □□□

Leitz lights the way in fluorescence microscopy. Fifty straight years.

The field of fluorescence microscopy has benefited from intensive development in the past few years.

And no other company has contributed more innovations to microscopy than Leitz®.

Superior brightness.

Today's fluorescence microscopes have highly fluorochrome specific filter systems and superior optics, resulting in tremendously enhanced performance.

Multi-layer coating methods lead to asymmetric interference filters which permit excitation of fluorescence dyes at their absorption maximum, resulting in superior image brightness.

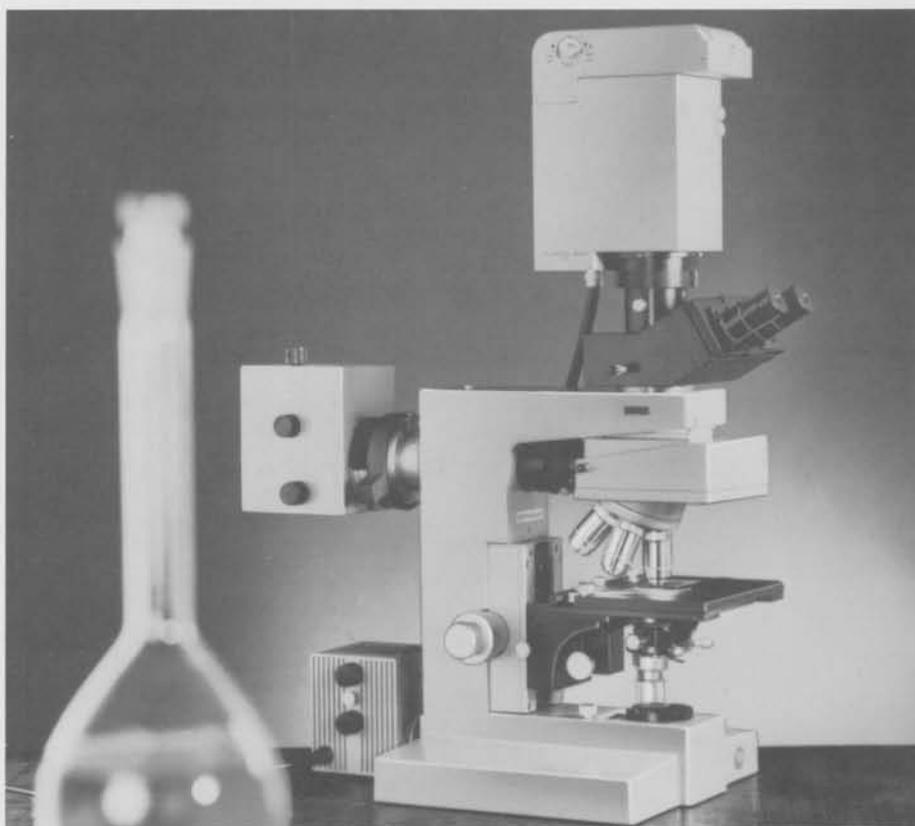

An example is the KP500 filter, which excites the FITC molecule at 490nm and which has a steep enough cutoff toward the longer wave lengths to permit observation of FITC fluorescence at 526nm.

Narrow band excitation by the use of KP500 together with an edge filter eliminates non-specific fluorescence.

More powerful light sources, such as the HB0100 and XB075, can be utilized for incident light fluorescence increasing image brilliance even further.

Modular filter system.

Entire filter systems consisting of exciter and barrier filters are now contained in one module. One can quickly be switched to three others or

interchanged against other application-specific modules, Leitz features eighteen in all.

And the elimination of the darkfield condenser by using incident light fluorescence adds convenience and improves the brightness of the fluorescence image.

The full aperture of the objective can be utilized and the specimen must be immersed only at the top.

Special fluorescence objectives.

Microscope objectives are now available which have been

specially computed to allow for fluorescence microscopy without any compromise. Oil immersion objectives from 10 to 100x and water immersion objectives from 25 to 100x. Most are available as phase contrast objectives.

THE JOURNAL OF IMMUNOLOGY®

INFORMATION FOR CONTRIBUTORS

Manuscripts should be sent to:

Dr. Joseph D. Feldman
 Department of Immunopathology
 Scripps Clinic and Research Foundation
 La Jolla, California 92037

If and when the manuscript is published, it will become the sole property of The Journal and all copyright will be taken out in the name of The Williams & Wilkins Company, and all rights in copyright reserved to The Williams & Wilkins Company.

Contributions may be short or long; the length should be commensurate with the scientific content. The chief criteria for acceptance are quality, originality, and clarity.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPT

The *original and two (2) copies* of the manuscript, including references, legends, figures and illustrations, must be submitted. The text and all other material, e.g., footnotes, references, and acknowledgments, must be typed in double space (at least $\frac{3}{16}$ -inch or 5-mm spacing from the bottom of one line to the top of a capital of a succeeding line) on one side of 8½ inch x 11 inch paper of good quality. The two (2) copies may be legible carbon or mimeographed copies or photocopies.

A short title to be used as a running head (not more than 50 characters) should be typed alone on the first page. Type the complete title on the second page, and the authors' full names (first name, middle initial(s), surname) and affiliations on the third page. *The format of The Journal must be followed in typing the text and the list of references.* References will be numbered as they appear in the text and will be listed in the format:

1. Kindt, T. J., and W. J. Mandy. 1972. Recombination of genes coding for constant and variable regions of immunoglobulin heavy chains. *J. Immunol.* 108:1110.

Only papers that have been accepted for publication should be listed in the references (i.e., articles that are already paginated or in press). Manuscripts in preparation, unpublished observations, and personal communications should be referred to as such in text; completed manuscripts that have been submitted for publication may be cited as a footnote to the text. If such information is in press when the author receives his galley proofs he may make appropriate citations in the text at that time.

All material to be set in a type size different from that of the text, such as tables, case histories, quotations, formulas, legends for figures and illustrations, footnotes, and references *must be typed on separate pages.* If abbreviations are to be used in the paper, the abbreviations and their meanings should be typed double spaced,

in one paragraph, on a separate sheet. Legends should not be attached to or written on figures or illustrations and must be typed double spaced. The position of tables and figures in the text may be indicated on the page margin.

List all components of culture medium used in experiments so that sufficient data to reproduce reported results are available. This information may be supplied in the Abbreviations footnote, in a table listing all components, by referring to a published article containing the information, or by identifying the commercial source which supplies the specific medium if components are listed by the supplier.

Illustrations and Photomicrographs. Photographs of figures and other illustrative material *must be on glossy paper (in triplicate)*; they must be clearly marked on the reverse side with the number, author's name, and orientation (top) and should be unmounted. Graphs should be in black ink on unlined or blue-lined paper. If graphs exceed 9 x 12 inches in size, they must be accompanied by glossy photographic reproductions within that size.

For photomicrographs a better grade of paper may be used at additional cost, up to \$100.00 for a single page. Estimates can be obtained when the manuscript is submitted for publication. Estimates for color photomicrographs are also available.

Communications. Short papers, at the author's request, may be printed in the Communications section of The Journal. These papers should not exceed two (2) printed pages in length, including summary, references, tables and figures. The text of a full printed page contains about 1000 words. If accepted, their publication will be accelerated, usually within two (2) months of acceptance. For this reason, proofs are not sent to the authors, but rather to the Editor. Suitability for publication will be judged on the basis of timeliness, novelty, and importance by the usual refereeing procedure.

MANUSCRIPTS THAT DO NOT CONFORM TO THESE SPECIFICATIONS MAY NOT BE ACCEPTED, AT THE EDITOR'S DISCRETION.

Page Charges. Authors will be charged \$30.00 for each printed page of an article or a Communication. All manuscripts, if accepted, will be published only after commitment by the author(s) or financial officer of their institution to pay a charge of \$30.00 per published page. Under exceptional circumstances, page charges will be waived if deemed appropriate by an adjudicating member of the Editorial Board.

Reprints. Reprints must be ordered in advance. A form showing the cost of reprints, together with an order slip, is sent with the galley proof. No more than 1000 reprints of any article may be purchased. The invoice for reprints will include the charges for pages.

Chemotherapy of Infection

WILLIAM B. PRATT, University of Michigan School of Medicine. "Well written... lucid and interesting... Contains exceptionally clear explanations of the subcellular biochemical mechanisms of action and the sites of action of chemotherapeutic agents. The diagrams, tables, and illustrations are among the best that I have seen... There are excellent sections on the treatment of fungal infection, on antiviral drugs, and on drugs employed in treating parasitic diseases... A broad and deep foundation of knowledge for the medical student, house officer, or nonspecialist [and] a valuable addition to the library of the infectious disease specialist." — *Journal of the American Medical Association*. This book evolved from Dr. Pratt's acclaimed *Fundamentals of Chemotherapy* (Oxford, 1973)

1977 496 pp.; 65 illus. cloth \$17.95 paper \$9.95

Basic Immunogenetics

Second Edition

H. HUGH FUDENBERG, Medical University of South Carolina; **J.R.L. PINK**, Basel Institute for Immunology; **AN-CHUAN WANG**, Medical University of South Carolina; **STEVEN D. DOUGLAS**, University of Minnesota Medical School. "Excellent textbook badly needed for any introductory course in immunogenetics. Should there be a best-seller list for scientific books it would deserve one of the top positions..." — M. Zaleski, State University of New York, Buffalo. "Lucid description of molecular interaction of genetics and immunobiology... Recommended reference for graduates and established investigators." — Harris Rosenkrantz, Clark University.

1978 272 pp.; 43 illus. cloth \$11.95 paper \$7.95

Human Diseases Caused by Viruses

Recent Developments

Edited by **HENRY ROTHSCCHILD**, **FRED ALLISON, JR.**, and **CALDERON HOWE**; with **CHARLES F. CHAPMAN, JR.**, all at Louisiana State University School of Medicine. Sixteen experts in various areas of virology have written this authoritative sourcebook on current research in the diagnosis and treatment of the more important human viral diseases. Contributors include D. Carleton Gajdusek, Joseph L. Melnick, and Saul Krugman. Reference tables, a glossary, and numerous illustrations make this a fine reference for teachers and students of virology, microbiology, and epidemiology, while also lending it clinical practicability.

1978 400 pp.; 50 illus. \$17.95

Prices are subject to change.

Immunology Simplified

T. R. BOWRY, University of Nairobi. Clearly written and enhanced by useful diagrams, this text examines all the basic principles of immunology, keeping pace with rapid advances in the discipline. The emphasis is clinical and practical, but embodies immunology's scientific basis. Discussion encompasses the biological aspects of immunity, immunity to bacterial and viral infections, and to parasitic diseases, cancer immunology and transplantation immunology, hypersensitivity states, immunodeficiency diseases, and several other topics.

1978 240 pp.; 45 illus. paper \$6.95

The Distribution of the Human Blood Groups and Other Polymorphisms

Second Edition

A. E. MOURANT, **ADA C. KOPEĆ**, **K. DOMANIEWSKA-SOBCZAK**, all of the Serological Population Genetics Laboratory, St. Bartholomew's Hospital, London. "This compendium has a depth, breadth, and comprehensiveness unlikely to be equaled or even attempted in years to come." — *Journal of the American Medical Association*. "It is not possible to do justice to this splendid book in a brief review... It belongs in every university library, every blood bank, every anthropology department, and on the desk of every one interested in any aspect of genetic polymorphisms." — *The Quarterly Review of Biology*.

1976 1,072 pp.; plates, tables, maps \$170.00

Blood Groups and Diseases

A. E. MOURANT, **ADA C. KOPEĆ**, and **K. DOMANIEWSKA-SOBCZAK**. The authors bring together the vast body of data on the frequencies of the blood groups and other biochemical characters in persons suffering from each of a wide range of diseases, and analyze them statistically. They are thus able to demonstrate much more clearly than was previously possible that blood groups are associated with a variety of types of cancer and ulcer, with hemorrhage, with clotting diseases, and with some infections. Other hereditary blood factors are found to be associated with emphysema, cirrhosis of the liver, malaria, and many diseases of the immune system. The research worker is provided with a unique key to the literature, and the clinician shown how to apply the results by assessing susceptibility to the diseases concerned, prognosis in established disease, and in some cases, planning treatment.

THE JOURNAL OF IMMUNOLOGY®

Information for Subscribers

Published monthly, beginning January, 1929. (From 1916 to 1925, and in 1928 Volumes I-X inclusive, and Vol. XV published bi-monthly.)

Annual Subscription Rates—U.S.A. AND POSSESSIONS: personal, \$80.00; institutional, \$100.00; single copy, \$9.00. FOREIGN: personal, \$90.00; institutional, \$110.00; single copy, \$10.00. Institutional (multiple reader) rate applies to libraries, schools, hospitals, clinics, group practices, and federal, commercial, and private institutions and organizations. A special rate of \$27.00 (\$37.00 foreign) is available to Students and Post-Doctoral Fellows. Certification forms may be obtained from the office of the American Association of Immunologists in Bethesda. The subscriptions of members of the American Association of Immunologists are included in the membership dues and are handled by the Association's Treasurer. Dr. Henry Metzger, American Association of Immunologists, 9650 Rockville Pike, Bethesda, Md. 20014. All other subscriptions should be sent to the publishers.

Change of address: Publisher must be notified 60 days in advance. Journals undeliverable because of incorrect address will be destroyed. Duplicates can be obtained (if available) from the publisher at the regular price of single issues.

New subscriptions and renewals are entered to begin with the January or July issue.

Subscriptions should be renewed promptly: To avoid a break in your series, subscriptions should be renewed promptly. The publishers cannot guarantee to supply back issues on belated renewals.

Microfilm. For availability, inquire of The Williams & Wilkins Company.

Reprints of individual articles are available *only* from authors.

UNDERSTANDING IMMUNOLOGY

By ALASTAIR J. CUNNINGHAM

Understanding Immunology provides a comprehensive and authoritative overview of the whole field of modern immunology and its ramifications into such areas as genetics, transplantation, cancer, and infectious disease. It differs from previous texts in that the main emphasis is on principles: an attempt has been made to explain the often complex phenomena of immunology in terms of simple, underlying concepts. The book is based on a series of lectures

1978, 272 pp., clothbound: \$16.00/£11.35/ISBN: 0-12-199870-3 softcover (t): \$8.95/£6.40/ISBN: 0-12-199872-X

given by the author to advanced science undergraduates and requires no previous knowledge of the subject, but it assumes an acquaintance with the principles of biology and biochemistry. It should be of value to undergraduate and graduate students in biology, medicine, veterinary medicine, and dentistry, and to workers in these and related disciplines who wish to acquaint themselves with immunology.

AUTOIMMUNITY

GENETIC, IMMUNOLOGIC, VIROLOGIC AND CLINICAL ASPECTS

Edited by NORMAN TALAL

CONTENTS: GENETIC, IMMUNOLOGIC AND VIRAL ASPECTS: *F. Bach*, The Major Histocompatibility Complex and Its Relationship to Autoimmune Disease. *N. L. Warner*, Genetic Aspects of Autoimmune Disease in Animals. *N. R. Rose*, Genetic Regulation in Autoimmune Thyroiditis. *A. C. Allison*, Autoimmune Diseases: Concepts of Pathogenesis and Control. *W. P. Weigle*, Cellular Events in Experimental Autoimmune Thyroiditis, Allergic Encephalomyelitis and Tolerance to Self. *R. K. Gershon*, Suppressor T Cell Dysfunction as a Possible Cause for Autoimmunity. *N. Talal*, Autoimmunity and Malignant Lymphoproliferation: Manifestations of Immunoregulatory Disequilibrium. *J. F. Bach*, Thymic Hormones and Autoimmunity. *I. R. Cohen*, and *H. Wekerle*, Autoimmunity, Self-Recognition and Blocking Factors. *H. Kohler* and *D. A. Rowley*, Self-Recognition: The Basic Principle in the Immune System. *A. O. Haakenstad* and *M. Man-*

nik, The Biology of Immune Complexes. *R. M. Zinkernagel*, H-2 Restriction of Cell-Mediated Virus-Specific Immunity and Immunopathology: Self-Recognition, Altered Self and Autoaggression. *M. R. Proffitt*, *M. S. Hirsch*, and *P. H. Black*, Viruses, Autoimmunity and Murine Lymphoma. *J. Levy*, C-Type RNA Viruses and Autoimmune Disease. CLINICAL ASPECTS: *R. C. Williams*, Infection and Autoimmunity. *A. J. Ammann*, Immunodeficiency Disorders and Autoimmunity. *F. M. Burnet*, Autoimmunity and Aging. *D. Glass* and *P. H. Schur*, Autoimmunity and Systemic Lupus Erythematosus. *N. J. Zvaifler*, Rheumatoid Arthritis. *I. R. Mackay* and *P. R. Carnegie*, Cell Receptors and Autoimmune Responses. *D. Doniach*, Autoantibodies to the Thyrotropin (TSH) Receptors on Thyroid Epithelium and Other Tissues. *P. Y. Paterson*, Autoimmune Neurologic Disease: Experimental Animal Systems and Implications for Multiple Sclerosis.

LYMPHOCYTE DIFFERENTIATION, RECOGNITION, AND REGULATION

By DAVID H. KATZ, M.D.

CHAPTER HEADINGS: Introduction. Surface Antigens and Markers on T Lymphocytes. Surface Antigens and Markers on B Lymphocytes. Surface Antigens Present on T Lymphocytes and Also on B Lymphocytes. Ontogeny of the Two Major Classes of Lymphocytes. Surface Immunoglobulin on Lymphocytes. Immunological Specificity of Immunocompetent Lymphocytes.

Functional Properties of T Lymphocytes. Functional Properties of B Lymphocytes. Regulatory Cellular Interactions in Immune Responses. The Allogenic Effect on Immune Responses. Genetic Control of Immune Responses and Cellular Interactions. Mechanisms of Regulatory Cellular Interactions. Immunological Tolerance.

1977, 749 pp., \$42.00/£29.85 ISBN: 0-12-401640-5

ADVANCES IN IMMUNOLOGY VOLUME 26

Edited by FRANK J. DIXON and HENRY G. KUNKEL
