On the cover: Fascin1, an actin-bundling protein, is greatly induced upon dendritic cell maturation. Characterization of fascin1 knockout dendritic cells revealed that it is critical for cell migration into draining lymph nodes: Fascin1-null cells are flatter, fail to disassemble podosomes, exhibit severely reduced veil-like dorsal ruffles, and showed decreased chemotaxis. Yamakita, Y., F. Matsumura, M. W. Lipscomb, P.-c. Chou, G. Werlen, J. K. Burkhardt, and S. Yamashiro. 2011. Fascin1 promotes cell migration of mature dendritic cells. *J. Immunol.* 186: 2850–2859.
