Multi-dimensional Flow Cytometry

What dimension is missing in your cell's signature?

Gain insight into single cell analysis with the QuantiGene® FlowRNA Assay,

a novel multiplex RNA hybridization protocol using a standard flow cytometer. Choose from a catalog of more than 4,000 probes or request a custom set at no additional charge.

We're On Your Wavelength

Whatever your flow cytometry needs and challenges, Beckman Coulter is right there for you with the high quality reagents you need to advance your research.

Choose reagents for research applications that range from basic immune monitoring to hematological malignancies, dendritic cells, T cells, B cells and more. Our complete product portfolio includes monoclonal antibodies, tandem dyes, dye-conjugated antibodies, and cocktails, manufactured in ISO-certified facilities. And our easy-to-use online store makes ordering a breeze.

Visit www.BeckmanCoulterReagents.com to view our product portfolio, check out our current sample offers – and see for yourself how Beckman Coulter has what you need.

Keeping a watchful eye
on cytosolic DNA.

Cytosolic dsDNA Sensors

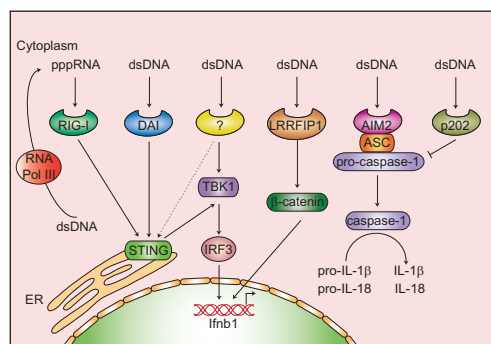

Innate immune detection of intracellular DNA derived from viruses and invasive bacteria is very important to initiate an effective protective response. This crucial step depends on cytosolic DNA sensors (CDSs), which, upon activation, trigger the production of type I interferons (IFNs) and the induction of IFN-responsive genes and proinflammatory chemokines. InvivoGen has developed innovative tools in order to facilitate the study of CDS.

➔ An expanding range of tools

- CDS Ligands
- CDS Reporter Cells
- CDS Inhibitors

➔ Functionally tested ligands

➔ Sterile VacciGrade™ for use *in vivo*

ANNUAL REVIEWS

It's about time. Your time. It's time well spent.

American Association of Immunologists Members: Save on ALL Annual Reviews Journals.

Please contact the American Association of Immunologists to place your order.

Annual Review of Immunology

Volume 32 • Online March 2014 • <http://immunol.annualreviews.org>

Co-Editors: **Dan R. Littman**, *Skirball Institute, New York University School of Medicine*
Wayne M. Yokoyama, *Washington University School of Medicine*

The *Annual Review of Immunology*, in publication since 1983, covers the significant developments in the field of immunology. This journal is ideal for active researchers in immunology and related fields, post-doctoral fellows and graduate students as well as teachers of immunology.

TABLE OF CONTENTS:

- *Endless Fascination*, William E. Paul
- *The Interaction Between Signal Regulatory Protein Alpha (SIRP α) and CD47: Structure, Function, and Therapeutic Target*, A. Neil Barclay, Timo K. van den Berg
- *TGF- β Activation and Function in Immunity*, Mark A. Travis, Dean Sheppard
- *Tyrosine Phosphatase PTPN22: Multifunctional Regulator of Immune Signaling, Development, and Disease*, Nunzio Bottini, Erik J. Peterson
- *$\gamma\delta$ T Cells: First Line of Defense and Beyond*, Yueh-hsiu Chien, Christina Meyer, Marc Bonneville
- *Malaria Immunity in Man and Mosquito: Insights into Unsolved Mysteries of a Deadly Infectious Disease*, Peter D. Crompton, Jacqueline Moebius, Silvia Portugal, Michael Waisberg, Geoffrey Hart, Lindsey S. Garver, Louis H. Miller, Carolina Barillas, Susan K. Pierce
- *Adoptive Immunotherapy for Cancer or Viruses*, Marcela V. Maus, Joseph A. Fraietta, Bruce L. Levine, Michael Kalos, Yangbing Zhao, Carl H. June
- *Immunology of Psoriasis*, Michelle A. Lowes, Mayte Suárez-Fariñas, James G. Krueger
- *Immunology of Relapse and Remission in Multiple Sclerosis*, Lawrence Steinman
- *Transcriptional Control of Early T and B Cell Developmental Choices*, Ellen V. Rothenberg
- *Biology of CD1- and MR1-Restricted T Cells*, Mariolina Salio, Jonathan D. Silk, E. Yvonne Jones, Vincenzo Cerundolo
- *Microglia Development and Function*, Debasis Nayak, Theodore L. Roth, Dorian B. McGavern
- *The Aryl Hydrocarbon Receptor: Multitasking in the Immune System*, Brigitta Stockinger, Paola Di Meglio, Manolis Gialitakis, João H. Duarte
- *Complement and Its Receptors: New Insights into Human Disease*, V. Michael Holers
- *Innate Immune Sensing and Signaling of Cytosolic Nucleic Acids*, Jiayi Wu, Zhijian J. Chen
- *Chromatin Contributions to the Regulation of Innate Immunity*, Stephen T. Smale, Alexander Tarakhovsky, Gioacchino Natoli
- *Interferon-Stimulated Genes: A Complex Web of Host Defenses*, William M. Schneider, Meike Dittmann Chevillotte, Charles M. Rice
- *Systems-Level Analysis of Innate Immunity*, Daniel E. Zak, Vincent C. Tam, Alan Aderem
- *Antigen Presentation in the Autoimmune Diabetes of the NOD Mouse*, Emil R. Unanue
- *Metabolic Regulation of Immune Responses*, Kirthana Ganeshan, Ajay Chawla
- *Anticytokine Autoantibody-Associated Immunodeficiency*, Sarah K. Browne
- *Chemokines and Chemokine Receptors: Positioning Cells for Host Defense and Immunity*, Jason W. Griffith, Caroline L. Sokol, Andrew D. Luster

The Most Complete TGF- β ELISA Kits

TGF- β Family

Transforming growth factor beta (TGF- β) is a multifunctional cytokine that plays pivotal roles in diverse biological processes, including the regulation of cell growth and survival, cell and tissue differentiation, development, inflammation, immunity, hematopoiesis, and tissue remodeling and repair. Its complex biology requires a diverse set of quantitative assay tools to measure the various components involved in the TGF- β 1 pathway.

LEGEND MAX™ ELISA Kits:

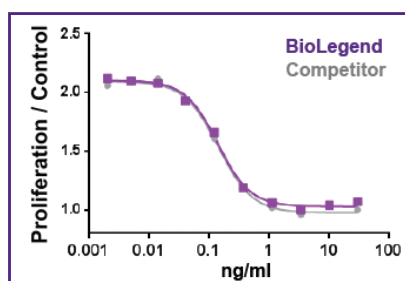

- Free Active TGF- β 1 Kit
- Total TGF- β 1 Kit
- Latent TGF- β Kit
- Soluble GARP Kit
- LAP Kit

ENDOWED RESEARCH FACULTY POSITION IN IMMUNOLOGY/RHEUMATOLOGY

Mayo Clinic in Rochester, MN is seeking applications from established outstanding basic science/ translational investigators with internationally competitive and extramurally-funded research programs in molecular mechanisms of immune regulation as faculty for an endowed research position in Immunology and Rheumatology. The Department of Immunology includes 38 independent investigators, sponsors outstanding NIH-funded Ph.D. and M.D./Ph.D. training programs, and provides an interactive, collaborative environment for the investigation of basic mechanisms of immunity and the application of new insights to the treatment of human disease. The Division of Rheumatology includes 29 staff members who conduct collaborative research with an emphasis on clinical, epidemiological, and translational studies.

The ideal candidates will be researchers with innovative programs relevant to human immunology and autoimmunity, particularly as they relate to systemic rheumatic diseases. Candidates meeting these criteria who also possess expertise in innate immunity, a successful track record of publications, and a strong interest in supporting our outstanding graduate education programs are particularly encouraged to apply.

Mayo Clinic offers a highly competitive compensation package with sustained intramural funding, outstanding laboratory facilities, capital equipment funding, technical and computational resources, and exceptional benefits. Laboratory facilities include 200 biomedical research laboratories, institutionally-supported state-of-the-art animal facilities, molecular and microscopic core facilities, and unique human disease tissue banks.

Visit www.mayoclinic.org/scientist-jobs to learn more and to apply. Applications should include a CV, a description of research focus, and the names of five references. Specific questions related to the posting should be directed to: Diane Jelinek, Ph.D., Professor and Chair, Department of Immunology or Eric Matteson, M.D., Professor and Chair, Division of Rheumatology c/o schilbe.jennifer@mayo.edu.

You may also scan the code to begin your job search.

Heal the sick, advance the science, share the knowledge.
