Multi-dimensional Flow Cytometry

What dimension is missing in your cell's signature?

Gain insight into single cell analysis with the QuantiGene® FlowRNA Assay,

a novel multiplex RNA hybridization protocol using a standard flow cytometer. Choose from a catalog of more than 4,000 probes or request a custom set at no additional charge.

Antibodies for Intracellular Flow Cytometry

from Cell Signaling Technology

WB IP IHC IF F CHIP

In vertebrates, the Wnt/ β -Catenin signaling pathway is important in early embryonic development and tumorigenesis. CST offers flow cytometry validated antibodies to multiple intracellular components in the Wnt/ β -Catenin pathway.

- Validated for intracellular proteins
- Highly specific and sensitive antibodies
- Lot-to-lot consistency
- Technical support from the CST scientists who produced and validated your antibody

Wnt/ β -Catenin Signaling

#4627 detects β -Catenin in HeLa (positive), but not NCI-H28 (negative) cells.

#8466 detects Ser9 phosphorylated GSK-3 β in stimulated cells.

β -Catenin (L54E2) Mouse mAb (Alexa Fluor[®] 647 Conjugate) #4627: Analysis of NCI-H28 cells (blue) and HeLa cells (green).

Phospho-GSK-3 β (Ser9) (D85E12) XP[®] Rabbit mAb (PE Conjugate) #8466: Analysis of NIH/3T3 cells treated with hPDGF-BB #8912 and λ phosphatase (red), untreated (blue), or treated with hPDGF-BB #8912 only (green).

LEF1 (C12A5) Rabbit mAb (Alexa Fluor[®] 488 Conjugate) #8490: Analysis of Jurkat cells using #8490 (green) compared to Rabbit (DA1E) mAb IgG XP[®] Isotype Control (Alexa Fluor[®] 488 Conjugate) #2975 (red).

TCF1 (C63D9) Rabbit mAb (Pacific Blue[™] Conjugate) #9066: Analysis of Jurkat cells using #9066 (green) compared to Rabbit (DA1E) mAb IgG XP[®] Isotype Control (Pacific Blue[™] Conjugate) #9078 (red).

The Most Complete TGF- β ELISA Kits

IMMUNOLOGY 2014™: Visit Us at Booth #702

TGF- β Family

Transforming growth factor beta (TGF- β) is a multifunctional cytokine that plays pivotal roles in diverse biological processes, including the regulation of cell growth and survival, cell and tissue differentiation, development, inflammation, immunity, hematopoiesis, and tissue remodeling and repair. Its complex biology requires a diverse set of quantitative assay tools to measure the various components involved in the TGF- β 1 pathway.

LEGEND MAX™ ELISA Kits:

- Free Active TGF- β 1 Kit
- Total TGF- β 1 Kit
- Latent TGF- β Kit
- Soluble GARP Kit
- LAP Kit

SONY

See any color you like.

The SP6800 Spectral Analyzer is Sony's newest and most unique flow cytometry-based system which can expand cell and biomarker research.

See and analyze all wavelengths from 500 nm to 800 nm. Spectrally unmix overlapping colors in a single run. Remove interfering autofluorescence or analyze autofluorescence as an independent color.

Operate powerful software providing new tools, analysis techniques and an easy to use interface.

Visit our website or contact a local sales representative for more information.

We're On Your Wavelength

Whatever your flow cytometry needs and challenges, Beckman Coulter is right there for you with the high quality reagents you need to advance your research.

Choose reagents for research applications that range from basic immune monitoring to hematological malignancies, dendritic cells, T cells, B cells and more. Our complete product portfolio includes monoclonal antibodies, tandem dyes, dye-conjugated antibodies, and cocktails, manufactured in ISO-certified facilities. And our easy-to-use online store makes ordering a breeze.

Visit www.BeckmanCoulterReagents.com to view our product portfolio, check out our current sample offers – and see for yourself how Beckman Coulter has what you need.

fast track to success.

REPORTER CELL LINES

Illuminate signaling pathways with engineered cells.

InvivoGen provides a wide collection of reporter cell lines to provide a **rapid, simple and reliable method** to monitor the activation of intracellular signaling pathways induced by microbial molecules or cytokines. These engineered cell lines stably express inducible, **SEAP, Lucia luciferase or both reporter genes**. Exposure to a stimulus induces the pathway modulating reporter activity that can be readily assessed qualitatively and quantitatively.

➔ A large choice of Reporter Cell Lines

- MEF
- HEK 293
- B16 Melanoma
- THP-1 Monocytes
- Jurkat T Lymphocytes
- Ramos B Lymphocytes
- RAW 264.7 Macrophages

➔ Highly sensitive to PRR/Cytokine stimulation

➔ Compatible with high throughput screening

BD Horizon™ Brilliant Ultraviolet™ and the BD LSRFortessa™ X-20

Ultraviolet laser and reagents expand research capabilities and clarify results.

A whole new
spectrum of choice.

Helping all people
live healthy lives

BD Horizon Brilliant Ultraviolet reagents open a new world of choice and productivity for scientists who use multicolor flow cytometry in their research. By adding the ultraviolet range to panel design, markers can be spread over more lasers, reducing compensation requirements of the experiment.

Use of these new ultraviolet excitable dyes can reduce setup time because there is less need to adjust for compensation.

When the dyes are combined with a dedicated ultraviolet laser position, your options and capabilities are further expanded.

Find out how you can add a whole new spectrum of productivity to your research with BD Horizon Brilliant Ultraviolet dyes and the ultraviolet capable BD LSRFortessa X-20 special order analyzer. Tools and information available at bdbiosciences.com/go/ultra.
