On the cover: The digital image shows a tangential section of a colon biopsy from a patient with ulcerative colitis. The section was immunohistochemically stained for one of the prostaglandin D₂ receptors, chemoattractant receptor homologous molecule expressed on Th2 cells (CRTH2; brown), and counterstained with hematoxylin. Abundant staining can be seen in the inflammatory infiltrates and epithelial cells of the crypts. Sturm, E. M., B. Radnai, K. Jandl, A. Stančić, G. P. Parzmair, C. Högenauer, P. Kump, H. Wenzl, W. Petritsch, T. R. Pieber, R. Schuligoi, G. Marsche, N. Ferreira, A. Heinemann, and R. Schicho. 2014. Opposing roles of prostaglandin D₂ receptors in ulcerative colitis. *J. Immunol.* 193: 827–839.
