Detect RNA and protein simultaneously in millions of single cells

PrimeFlow® RNA Assay reveals the dynamics of RNA and protein expression within individual cells using a standard flow cytometer to facilitate unprecedented analysis of single-cell biology.

The New BD Accuri™ C6 Plus Flow Cytometer

The best of personal flow cytometry just got better.

You inspired us to go the extra mile.

Like our customers, we're not satisfied resting on our previous accomplishments. The new BD Accuri™ C6 Plus flow cytometer has everything that made its predecessor a best-in-class choice for life science researchers, plus further enhancements in sensitivity, reliability, and simplicity. If you value reliability, ease-of-use and versatility in a personal flow cytometer, you'll love what the "Plus" does for your lab.

Perhaps even more inspired is what we didn't change: the price and our mission—Flow Cytometry Within Reach.™ It's just another way we honor all of you who go the extra mile in your work, every day. Learn more and take advantage of introductory offers at **bdbiosciences.com/go/accuri**
