$1000.00

FOR THE BEST BOOK ON A SCIENTIFIC SUBJECT

The Williams & Wilkins Company offers a cash award of $1,000.00 to be presented to that man or woman, engaged in scientific pursuits, who submits a book manuscript dealing with some phase of scientific research, discovery, endeavor, or history.

The manuscript that is sought for will possess two qualities:

1) It will be authentic. It must pass the test of scrutiny by scientific readers.

2) It will qualify as "belles lettres." The story—whatever it may be—will be told in such a way as to capture and hold the attention and interest of all that portion of the public of sufficient intellectual endowment to read books.

The manuscript will approximate 100,000 words in length. It will be submitted, in form ready for publication, on or before July 1, 1937.

This proffer is made under the conviction that no activity produces material more vivid, more dramatic, or of greater human appeal, than science does; that the interpretation of science to the non-professional public is an endeavor worthy of the best efforts of the best minds; that among men and women of science may be found those who can best make this interpretation.

Inquiry as to details is cordially and earnestly invited. You may use the coupon below, but it is not necessary.

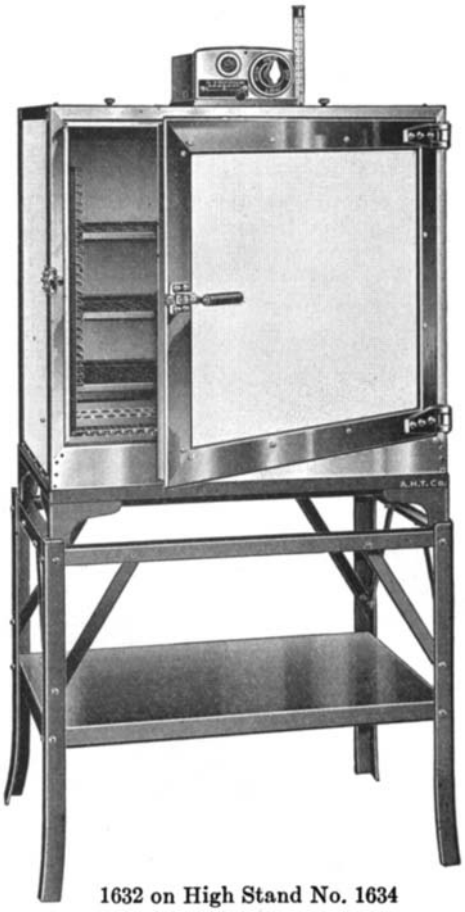
WEBER ELECTRIC
HOT AIR STERILIZERS



1632 on High Stand No. 1634

WEBER ELECTRIC HOT AIR STERILIZERS. With automatic control and pointer scale for approximate setting at any desired temperature between 150° and 180°C.

A new construction of asbestos transite one-inch thick and Monel metal, so that all possibility of rusting or corrosion is avoided.

Shelf brackets 1½ inches apart provide for a variety of shelf placement, and shelves can be loaded while partially withdrawn. Dimensions are designed for convenient and economical handling of pipettes in boxes, Petri dishes and flasks of the sizes mostly used.

Current consumption at 110 volts is 17.5 amperes for operation at 170°C for the No. 1630, and 25.5 amperes for the No. 1632. Time required for reaching this temperature from ordinary room temperature, with sterilizing chamber empty, is approximately 1 hour and 45 minutes for the No. 1630, and approximately two hours for the No. 1632.

Operating sensitivity, i.e. maximum variation in temperature at location of thermometer bulb, when operating empty at a constant temperature of approximately 170°C, is about ±1.0°C.

Operating uniformity, i.e. maximum variation in temperature throughout working shelf space in relation to the temperature at location of thermometer bulb, when operating empty at a constant temperature of approximately 170°C, is about ±8.0°C.

In common with other electrically heated utensils of this type, these sterilizers can be used on either a.c. or d.c., at a given voltage, without serious harm. Practical experience shows, however, that some variation in condenser capacity for a.c. as compared with d.c. insures greater efficiency and certainty of thermo-regulation and, for this reason, we recommend that utensils be ordered for the current available, as indicated in our listing.

Heaters are wound for 1000 watts and can not, therefore, be used on a 6-ampere lamp socket but must be connected directly to a line of this capacity.

			Code Word
1630.	**Hot Air Sterilizer, Weber Electric,** with Monel metal finish, inside dimensions 15 inches high × 18 inches wide × 18 inches deep. With two shelves, one Sterilizer Thermometer, 200°C, and complete operating directions. On low stand, i.e. angle iron feet 3½ inches high. For use on 110 volts, a.c.	210.00	*Alfke*
1632.	**Ditto,** but with inside dimensions 23 inches high × 26 inches wide × 18 inches deep and with three shelves. On low stand. For use on 110 volts, a.c.	315.00	*Alftl*
1633.	**High Stand,** only, for No. 1630 Sterilizer, 26¼ inches high	9.25	*Algep*
1634.	**Ditto,** but for use with No. 1632 Sterilizer	12.50	*Alggl*
