

*Before you study the next serologic report
get acquainted with Kahn's*

**SEROLOGY IN SYPHILIS CONTROL
PRINCIPLES OF SENSITIVITY AND SPECIFICITY**

Because the book

Shows how to evaluate the results of tests. (It does not discuss which test is better or poorer than the other, nor does it describe technique.)

Gives you the reasons for "unexpected" reactions and tells what to do about them—

- whether **MULTIPLE TESTS**
- SPLIT SPECIMENS**
- SUPERSENSITIVE TESTS**
- REPEAT EXAMINATIONS**
- QUANTITATIVE TESTS**

are the answer to the problem before you.

Presents new experimental studies, summarizes the development of serologic aims and thought, analyzes divergent views, and proposes a broad plan for rendering blood tests more dependable.

Enables you to utilize available tests to best advantage in the diagnosis and treatment of syphilis and in the control of the disease.

x + 206 pages \$3.00

A special feature is the survey of Serology and Syphilis Control to which a group of experts have contributed. They stress the importance of the subject in relation to national defense and present concisely what is being done about it in various industries by the armed forces, and by other government and private agencies.

By **REUBEN L. KAHN, M.S., D.Sc.**
Director of Clinical Laboratories, University of Michigan Hospital.

**THE EMPLOYMENT BUREAU
OF THE**

Society of American Bacteriologists

● For the benefit both of employers seeking to fill vacancies, and of applicants desiring a position in the field of bacteriology, the Society of American Bacteriologists maintains an Employment Bureau. There is no charge for registering with the Bureau, but applicants for positions agree to send the bureau a small per cent of their salary for the first three months, viz., 3% if the applicant is a member of the Society, and 5% if a non-member. Funds received in this manner are used to defray actual operating expenses of the bureau on a non-profit basis, and any excess sums are transferred to the Society for the support and enlargement of its publications, research fellowship, culture collection, and other activities.

● Positions filled through the bureau include those of

- | | |
|--------------------------------|------------------------------------|
| Research Bacteriologist | Agricultural Bacteriologist |
| Teaching Bacteriologist | Industrial Microbiologist |
| Medical Bacteriologist | Laboratory Technician |
| Serologist | Hospital Technician |

● Under present conditions, causing frequent changes, the Bureau is exerting added effort to fill vacancies. All inquiries are given prompt and careful attention. Address communications to:

*The only complete standard MEDICAL
DICTIONARY with a 1942 edition*

STEDMAN'S

1274 double column pages
illustrated

\$7.50 With
thumb
index

The 15th edition of **STEDMAN'S PRACTICAL MEDICAL DICTIONARY**, edited by Stanley Thomas Garber, M.D., is more than an ordinary revision. The entire work was reset. Therefore an unusually large number of additions, corrections, eliminations could be made without regard to the cost of such changes.

The most important newcomers are the numerous biochemical and chemotherapeutic compounds. The terms in the fields of allergy and hematology have been rewritten. The entire terminology of the bacteria has been revised.

Basically the dictionary retains the features and arrangement that have made it irreplaceable to physicians, students, and thousands of others who meet in their reading medical, surgical, pharmaceutical, biological, chemical, dental and related scientific terms.
