

THE JOURNAL OF IMMUNOLOGY

VIRUS-RESEARCH AND EXPERIMENTAL CHEMOTHERAPY

Manuscripts should be typewritten and carefully revised before submission and should be sent to Dr. Arthur F. Coca, Pearl River, New York. Authors will be charged for space in excess of 20 printed pages; also for all illustrations and for tabular matter in excess of 10 per cent of the text space.

THE JOURNAL OF IMMUNOLOGY is issued monthly. Two volumes a year are issued.

Twenty-five reprints, without covers, of articles will be furnished to contributors free of cost when ordered in advance. A table showing cost of reprints, with an order slip, is sent with proof. Orders for purchased reprints must be limited to 1,000 copies.

Published monthly, beginning January, 1929. (From 1916-1925, and in 1928 Volumes I-X, inclusive, and Vol. XV published bi-monthly).

The subscription price is \$5.00 per volume. For countries outside the Postal Union, add 50 cents a volume. Two volumes ordered at the same time, \$9.00; overseas, \$10.00. The subscriptions of members of the American Association of Immunologists are included in the membership dues and are handled by the Association's Treasurer, Dr. Arthur F. Coca, Pearl River, New York. All other subscriptions should be sent to the publishers.

Claims for copies lost in the mails must be received within 30 days (domestic). For the duration of the war, delivery overseas cannot be guaranteed and must be at subscriber's risk. Changes of address must be received within two weeks of the date of issue.

Correspondence concerning business matters should be addressed to The Williams & Wilkins Company, Mount Royal and Guilford Avenues, Baltimore-2, U. S. A.

New subscriptions and renewals are entered to begin with the first issue of the current volume. Should any issue of the current volume be out of print at the time the subscription order is received, the pro-rata value of such numbers will be credited to the next volume, and the renewal invoice therefore adjusted accordingly.

Subscriptions should be renewed promptly—To avoid a break in your series, subscriptions should be renewed promptly. The publishers cannot guarantee to supply back issues on belated renewals.

Subscriptions, new or renewal, should be sent to the Publishers or to Agents listed below.

AGENTS

For Australia: Angus & Robertson, Limited, 89-95 Castlereagh Street, Sydney.

For the British Empire, except Australia and Canada: Baillière, Tindall & Cox, 8 Henrietta St., Covent Garden, W C 2, London, England.

For Canada: Wm. Dawson & Sons, Ltd., 70 King Street East, Toronto.

DETECTION OF THE GONOCOCCUS

THE superiority of the cultural method over the usual microscopic technic for detection of gonococcal infections has repeatedly been demonstrated. The cultural method is especially indicated in chronic and treated cases and for determining the release of patients.

Bacto-Proteose No. 3 Agar

enriched with a solution of Bacto-Hemoglobin to form a chocolate agar, is an ideal medium for cultural detection of *Neisseria gonorrhoeae* from all types of gonococcal infections. Upon this medium gonococcus colonies may be detected even when the organisms are present in the exudate in such small numbers that they may be missed upon microscopic examination.

Proteose-Peptone No. 3

is the essential ingredient of Bacto-Proteose No. 3 Agar. This peptone, in a saline solution, is also recommended as a diluent for suspending the exudate prior to inoculation on chocolate agar.

Bacto-Hemoglobin

in a two per cent solution is the preferred enrichment for preparation of chocolate agar from Bacto-Proteose No. 3 Agar. It is readily soluble in water and is sterilized in the autoclave.

Bacto-Dextrose Starch Agar

is a very useful medium for propagation of pure cultures of the gonococcus. The organism grows luxuriantly upon this medium without further enrichment. Bacto-Dextrose Starch Agar also supports excellent growth of many other pathogenic bacteria and when used in half strength it is well suited for maintaining stock cultures.

Bacto-Phenol Red Media

are particularly useful for determination of fermentative reactions of newly isolated strains of the gonococcus. A selected group of complete agar and broth media are available, as are also the basic media without carbohydrate.
