

THE JOURNAL OF IMMUNOLOGY

*Official Journal of
The American Association of Immunologists*

CONTENTS

The Relationship between a Serum and Tissue Inhibitor and the Rheumatoid Disease Agglutinating Factor. J. D. GRAY.....	1
Immune Degradation in Passively Sensitized Mice. I. Degradation of Antigen as a Function of the Amount of Antigen and Antibody Used. GERONIMO TERRES AND W. WOLINS.....	9
Studies on the Prevention of Mumps. VII. Evaluation of Dosage Schedules for Inactivated Mumps Vaccine. WERNER HENLE, MARY N. CRAWFORD, GERTRUDE HENLE, HUMBERTO FAZ TABIO, FRIEDRICH DEINHARDT, ANGEL GUERRA CHABAU AND IRVING J. OLSHIN.....	17
Effects of Cysteine and Acetic Anhydride on the Antigenic and Catalytic Sites of Dog Intestinal Alkaline Phosphatase. MAX SCHLAMOWITZ.....	29
Studies on Organ Specificity. VI. Cross-reactions of Thyroid Autoantibodies with Thyroids of Other Species. NOEL R. ROSE AND ERNEST WITEBSKY.....	34
Studies on Organ Specificity. VII. Production of Antibodies to Rabbit Thyroid by Injection of Foreign Thyroid Extracts. ERNEST WITEBSKY AND NOEL R. ROSE....	41
Studies of Blood Group Antibodies. II. Fractionation of Rh Antibodies by Anion-Exchange Cellulose Chromatography. NEVA M. ABELSON AND ARNOLD J. RAWSON.....	49
Specific Hemagglutinins in X-Irradiated, Bone-Marrow Treated Mice Following Differential Immunization of Host and Donor. RICHARD M. GARVER, GEORGE W. SANTOS AND LEONARD J. COLE.....	57
Antigenic Stimuli for Transplantation Immunity to Rat Bone-Marrow Heterografts in Lethally X-Irradiated Mice. GEORGE W. SANTOS, LEONARD J. COLE AND RICHARD M. GARVER.....	66
Measles Antibodies in the Population of New Haven, Connecticut. FRANCIS L. BLACK. An Immunochemical Study of Streptococcal Diphosphopyridine Nucleotidase. M. GERALDINE PACE AND A. M. PAPPENHEIMER, JR.....	74
Effect of Bacterial Endotoxin on Resistance of Mice to Viral Encephalitides. Including Comparative Studies of the Interference Phenomenon. ROBERT R. WAGNER, RUTH M. SNYDER, EDWARD W. HOOK AND CHARLES N. LUTTRELL.....	83
Kinetics of Equine Complement. MYRON A. LEON AND ÅKE NORDÉN.....	87
	99

Information for Contributors

Manuscripts should be carefully revised and the original should be sent to

DR. JOHN Y. SUGG
Journal of Immunology
Cornell Medical College
1300 York Ave.
New York 21, N. Y.

Authors will be charged for space in excess of 15 printed pages, for all illustrations, and for tabular or graphic matter in excess of 10 per cent of the text space.

Reprints must be ordered in advance. A table showing cost of reprints, with an order slip, is sent with proof. Orders for purchased reprints must be limited to 1,000 copies. The invoice for reprints will also include charges for illustrations, excess pages and tabular matter, if any

Instructions for the Preparation of Manuscript

Copy should be typed double-spaced on one side only of 8½ x 11 paper. Even material that is to be set in a type size smaller than that of the main text (footnotes, references, etc.) should be double-spaced.

The author should supply a short title for use as a running head. This should be typed on a separate sheet as the first page of manuscript. Type the complete title of the article on a second sheet, and the authors' names and affiliations on a third sheet. All material that is to be set in a type size different from that of the main text should be typed on separate sheets. This includes tabular matter, case histories, quotations, formulas and other subsidiary matter in the text, footnotes, bibliographies, and legends for illustrations. Displayed formulas which are to be built up to more than one line of type, even if they are the same size type as the text, should be on a separate page. Legends should not be attached to or written on the illustration copy. Positions for tables and figures in the text may be indicated in the margin of the text page.

Manuscripts that do not conform to these instructions will be cut and rearranged so that the matter to be set in different sizes of type can be separated.

Galley proof. Authors will receive galley proofs of their papers set separately as outlined above. Galleys will be arranged in the following order: tables, running heads, footnotes, figure legends, text, bibliography. All material that has been cut from the body of the text will be inserted in its proper place in the galleys. This includes formulas, quotations, case histories, and other subsidiary matter. Manuscript will be arranged in this order: formulas, tables, footnotes, figure legends, text inserts including bibliography, text.

Illustrations. Copy for illustrations should be unmounted glossy photographs clearly identified as to number, author's name, and top of figure in soft crayon on the back. Graphs should be in India ink on bluelined paper. If larger than 9 x 12", they must be accompanied by glossy photographs within this size.

Peters & Van Slyke:
**QUANTITATIVE
 CLINICAL CHEMISTRY—**
Volume II (Methods)

“Peters and Van Slyke first published their monumental work on the quantitative analysis of biological materials in 1932. Except for a few minor revisions made when the book was reprinted for the Army, in 1943, this printing is unchanged. This volume (Volume II, Methods) is almost exclusively devoted to operation and technique of the analytical laboratory. There is a chapter on general chemical techniques as well as a chapter which presents the many special techniques which have been evolved to adapt quantitative analysis to biological fluids. The material in these chapters has stood well the test of time. Although many analytical procedures have been adapted for reading on the spectrophotometer, a perusal of this book, published twenty-five years ago, demonstrates graphically how little basic analytical techniques have changed over the last quarter of a century. This book is of value to the career investigator because of the presentation of many techniques long since discarded by the routine hospital laboratory but still of frequent value as research procedures.”—*J. M. B. Bloodworth, Jr., in A.M.A. Arch. Int. Med.*

CONTENTS: General chemical technique. Special biochemical technique. Analyses of gas mixtures. Carbon dioxide and oxygen tensions in alveolar air. Respiratory metabolism. Lung volume. Gasometric methods for analysis of blood and other solutions. Sugar. Lipoids. Total and non-protein nitrogen. Urea. Urinary ammonia. Amino acids. Uric acid. Creatine and creatinine. Lactic acid. Acetone and acetoacetic acid, and betahydroxybutyric acid. Total organic acids. Phenols. Hemoglobin and its derivatives. Proteins of urine, blood plasma and body fluids. Blood volume. Total base. Sodium and potassium. Calcium. Magnesium. The pH of blood and urine. Bicarbonate. Titratable acid and acid-base excretion in urine. Chloride. Phosphorus. Sulfur.

By JOHN P. PETERS, M.D., *Professor of Internal Medicine, Yale University School of Medicine;* and DONALD VAN SLYKE, M.D., *Member of the Rockefeller Institute for Medical Research*
