

IMMUNOCHEMICAL APPROACHES TO PROBLEMS IN MICROBIOLOGY

Edited by Michael Heidelberger and Otto J. Plescia,
Institute of Microbiology, Rutgers, The State University.

A volume based on a recent Symposium designed to bring together scientists representing different disciplines to consider more effective utilization of immunochemical methods in the further development of microbiology.

The scientific papers and discussion by panelists and invited audience cover the following topics: Quantitative immunochemical aspects of microbial specificity; precipitation and inhibition techniques; multiplicity and specificity of bacterial antigens; immunochemistry of viruses; so-called non-specific factors in immunity; and biosynthesis of antigens and antibodies.

The panelists were Ö. Ouchterlony, Pierre Grabar, H. G. Kunkel, J. H. Rockey, T. Tomasi, J. R. Marrack, Paul H. Maurer, E. A. Kabat, J. Baddiley, Maclyn McCarty, James T. Park, D. L. Shrivastava, C.
