

THE JOURNAL OF IMMUNOLOGY

Information for Contributors

Manuscripts should be carefully revised and the original should be sent to

DR. JOHN Y. SUGG
Journal of Immunology
Cornell Medical College
1300 York Ave.
New York, N. Y. 10021

Authors will be charged for space in excess of 10 printed pages and also for all illustrations and tabular or graphic matter in excess of 10 per cent of the pages in each article.

Author's alterations of type or illustrations on proof are charged to the author if in excess of an average of \$1.00 per printed page; correction of printer's errors are not charged to the author.

Reprints must be ordered in advance. A table showing cost of reprints, with an order slip is sent with proof. Orders for purchased reprints must be limited to 1,000 copies. The invoice or reprints will also include charges for illustrations, excess pages and tabular matter, if any.

Instructions for the Preparation of Manuscript

Copy should be typed double-spaced on one side only of 8½ x 11 paper. Even material that is to be set in a type size smaller than that of the main text (footnotes, references, etc.) should be double-spaced.

The author should supply a short title for use as a running head. This should be typed on a separate sheet as the first page of manuscript. Type the complete title of the article on a second sheet, and the authors' names and affiliations on a third sheet. All material that is to be set in a type size different from that of the main text should be typed on separate sheets. This includes tabular matter, case histories, quotations, formulas and other subsidiary matter in the text, footnotes, bibliographies, and legends for illustrations. Displayed formulas which are to be built up to more than one line of type, even if they are the same size type as the text, should be on a separate page. Legends should not be attached to or written on the illustration copy. Positions for tables and figures in the text may be indicated in the margin of the text page.

Manuscripts that do not conform to these instructions will be cut and rearranged so that the matter to be set in different sizes of type can be separated.

Galley proof. Authors will receive galley proofs of their papers set separately as outlined above. Galleys will be arranged in the following order: tables, running heads, footnotes, figure legends, text, bibliography. All material that has been cut from the body of the text will be inserted in its proper place in the galleys. This includes formulas, quotations, case histories, and other subsidiary matter. Manuscript will be arranged in this order: formulas, tables, footnotes, figure legends, text inserts including bibliography, text.

Illustrations. Copy for illustrations should be unmounted glossy photographs clearly identified as to number, author's name, and top of figure in soft crayon on the back. Graphs should be in India ink on bluelined paper. If larger than 9 x 12, they must be accompanied by glossy photographs within this size.

IMMUNOLOGY

Official Journal of the BRITISH SOCIETY FOR IMMUNOLOGY

Editor: L. E. GLYNN

VOL. 8, NO. 2

FEBRUARY 1965

CONTENTS

- J. T. BARRETT: An immunological study of procarypeptidase A and its enzyme
- J. T. BARRETT AND L. D. THOMPSON: Immunochemical studies with chymotrypsinogen A
- V. P. BUTLER, JR. AND J. H. VAUGHAN: The reaction of rheumatoid factor with animal gamma-globulins: quantitative considerations
- E. CENTENO, S. SHULMAN, F. MILGROM AND E. WITEBSKY: Immunological studies on adrenal glands. VI. The multiple nature of the rabbit adrenal autoantigens
- A. KLECZKOWSKI: A study of the effects of salt and of pH on precipitation of antigen-antibody compounds
- R. R. A. COOMBS, D. FRANKS, B. W. GURNER, MARGARET J. POLLEY AND C. B. RICHARDS: Studies on mixed agglutination with special reference to the A antigen and the physical properties of the operative antibodies
- EVA ORLANS AND M. ELAINE ROSE: Fowl antibody. VII. The effect of normal fowl serum factors on specific precipitation and on haemolysis by fowl complement
- SYLVIA D. LAWLER AND S. COHEN: Distribution of allotypic specificities on the peptide chains of human gamma-globulin
- LOTTIE KORNFIELD AND W. O. WEIGLE: The elution of ^{35}S -labelled C'_1 from antigen-antibody- ^{35}S complement precipitates
- D. E. S. STEWART-TULL: A modified PAS staining technique for polysaccharides in gels

for the two annual volumes of six parts (Single copies \$4 each)*

BLACKWELL SCIENTIFIC PUBLICATIONS

Andrewes:

VIRUSES OF VERTEBRATES

By Sir Christopher Andrewes, M.D., F.R.C.P., F.R.S., Wellcome Trust Fellow; Formerly Deputy Director, National Institute for Medical Research, Mill Hill, London.

For some time, researchers and practitioners have noted an acute need for a book in virology which would correspond to *Bergey's Manual* and its place in bacteriology. Now, The Williams & Wilkins Company is proud to announce that this book has been written by Sir Christopher Andrewes—a man who enjoys the reputation of being “the dean of viral nomenclature” the world over.

Viruses of Vertebrates is a new book of major importance, and will become the standard reference in its field. It provides essential information on all viruses which affect man and other vertebrates, and thus is invaluable for researchers, workers in university and diagnostic laboratories, public health workers, and both veterinary and medical students.

Divided into four sections, it is so planned that the facts about each virus are gathered under twelve standard headings. Pathogenic effects are considered only in so far as they are required to identify a virus and indicate its importance. This, however, necessitates considerable space devoted to disease-producing powers since it is largely by their deeds that they are known.

CONTENTS BY PARTS: RNA Viruses. DNA Viruses. Unclassified Viruses. Chlamydozoaceae. Note on Virus Classification. Index.

Major Revisions of Two Classics of Medical Literature

BACTERIAL AND MYCOTIC INFECTIONS OF MAN

Edited by *RENÉ J. DUBOS, Ph.D., Professor, The Rockefeller Institute—and JAMES G. HIRSCH, M.D., Professor, The Rockefeller Institute. With 41 Eminent Contributors.*

In this thoroughgoing revision of a classic text and reference, forty-one top scientists and physicians take stock of present day theory and practice of medical microbiology. Very extensively rewritten, the book includes sweeping revision and reorganization of the sections dealing with the general aspects of infectious diseases (history, bacterial anatomy, genetics and metabolism, pathogenesis, host response, prevention and therapy), sharp updating of the chapters dealing with individual bacteria, and a complete reassessment of the material on mycoses and fungal diseases. Greatly enlarged lists of pertinent references are to be found at the end of each chapter. Reviewers of former editions said: “. . . highly recommended . . . the entire volume is of such high quality that it is difficult to single specific chapters for commendation.” *American Journal of Public Health*. “. . . so well known and highly appreciated that (it) does not need any additional recommendation. . . . All the contributions are up to date and easy to read.” *International Archives of Allergy and Applied Immunology*. “. . . enthusiastically suggested as a solid foundation for anyone desiring a well-balanced presentation of the subject.” *Science*. “. . . should definitely be required reading for all students of immunology and infectious diseases.” *Yale Journal of Biology & Medicine*.

VIRAL AND RICKETTSIAL INFECTIONS OF MAN

Edited by *FRANK L. HORSFALL, JR., M.D., Director, Sloane-Kettering Institute for Cancer Research, New York—and IGOR TAMM, M.D., Professor, The Rockefeller Institute. With 51 Contributing Authorities.*

Fifty-one outstanding experts pool their special knowledge to bring a classic abreast of the very latest findings in its rapidly developing subject area. Among many major changes are those connected with—the revolutionary advances in the understanding of the RNA and DNA viruses, the structure and epidemiology of specific diseases, the biochemistry of bacteria infected by viruses, the biochemistry of animal virus reproduction, characteristics of virus-cell complexes, immune mechanisms in virus infections, transmission of viruses and epidemiology of virus infections, and principles of diagnostic virology. Reviewers of previous editions have said: “The book is outstanding and should be in all medical libraries and available to all physicians and others interested in the subject.” *New England Journal of Medicine*. “. . . a practical survey of the rapidly growing field of viral and rickettsial diseases.” *The American Journal of the Medical Sciences*. “. . . a very valuable contribution. . . . Here is brought together information which otherwise would have to be taken piecemeal from an enormous literature.” *The Yale Journal of Biology and Medicine*. “This book provides an invaluable refresher for all those who, either in the laboratory or in private practice, contend with these infections.” *Revue d’Immunologie*.
